wherein ring A and ring B each represent a benzene or naphthalene ring that may be substituted; at least one of the pair of adjacent groups R1 and R2 and the pair of adjacent groups R3 and R4 represent a pair of benzyl groups, and the other paired groups each represent an alkyl group having 1 to 4 carbon atoms or are connected to each other to form a 3- to 6-membered ring, and when one of the other pair of groups is not a pair of benzyl groups, then these each are an alkyl group of 1 to 4 carbon atoms or are connected to form a 3 to 6 member ring; Y1 and Y2 each represent an organic group having 1 to 30 carbon atoms; An^{m-} represents an m-valent anion; m represents an integer 1 or 2; and p represents a coefficient for maintaining the charge neutrality.

wherein the cyanine compound is selected from the group consisting of the following:

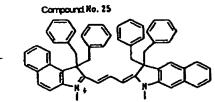

and

- (canceled) 2.
- (canceled) 3.
- 4. (previously presented) An optical recording material containing the cyanine compound of claim 1, wherein the optical recording material is formed on a substrate to make an optical recording medium.
- (previously presented) An optical recording medium 5. comprising a substrate and a thin film of the optical recording material of claim 4 on the substrate.

6. (new) An optical recording medium comprising a cyanine compound selected from the group consisting of the following:
